

Checkit Health — v1 Demo

TL;DR: v1 works end-to-end. 296 tweets in → 34 medical claims surfaced for review. To get to v2 (live data + fact-checking) we need an **X API key (~\$200/mo)** and **paid Gemini (<\$5/mo)**.

What v1 does

3-stage pipeline: **ingest** posts → **classify** with Gemini → **output** flagged claims to JSON + SQLite, each stamped `pending_fact_check`.

Run: `python run.py --input data/posts.json --output output/claims.json`

Results

Metric	Value
Posts ingested	296
Classified cleanly	65
Flagged as medical claims (conf ≥ 0.70)	34

Topic mix: **22 vaccine · 7 treatment · 3 other · 1 nutrition · 1 drug**

Example: "The Covid vaccine is the cause of Covid, not the cure." — vaccine, conf 1.00

Full interactive list in attached `dashboard.html`.

Limits of v1

- No live data (Apify scrape, not X API)
- No fact-checking yet — only triage
- Free-tier Gemini rate-limited 231 of 296 posts in this run

Asks for v2

Need	Cost	Unlocks
X API Basic	~\$200/mo	Live ingestion + real engagement data
Gemini paid tier	<\$5/mo	Removes daily quota wall
Eng time	—	Fact-checking stage + claim dedupe

The X API key is the single highest-leverage ask.
